

HARRY KLAIR

Cyber Security Graduate | SOC / Blue Team | Active SC Clearance

Rugeley, West Midlands · 07455 117100 · harryklair@hotmail.co.uk · Full UK driving licence

[harryklrr.github.io](https://github.com/HarryKlrr) · github.com/HarryKlrr · linkedin.com/in/harry-klair

PROFILE

SC-cleared Cyber Security graduate (BSc Hons, 2:1) seeking a Tier 1 SOC analyst role. I built and run a Wazuh/Sysmon detection lab in which I executed, triaged and documented nine attack scenarios against MITRE ATT&CK, finding and fixing two detection gaps along the way. I co-founded a small IT support business and work its live Jira Service Management queue every week. Studying for CompTIA Security+ (SY0-701) and active on Hack The Box.

SECURITY CLEARANCE

Active SC clearance (granted 2026) and BPSS. Willing to undergo further vetting.

TECHNICAL SKILLS

Security operations: Wazuh SIEM monitoring and log analysis, alert triage, custom detection rules (Wazuh, Sigma), MITRE ATT&CK mapping, incident reporting, response playbooks, phishing and malware-hash triage

Endpoint & logs: Sysmon, Windows Event Logs (4625, 4720, 4698, 1102, 5007), PowerShell command-line logging, Linux auth logs, Cowrie JSON

Systems & directory: Windows Server, Active Directory, Group Policy, NTFS/share permissions, Ubuntu Server 22.04, Kali Linux

Networking: TCP/IP, DNS, DHCP, firewalls, Wireshark, Nmap, iptables

Cloud & identity: Microsoft 365, Entra ID, IAM; Sentinel, Defender for Cloud, KQL (lab)

Scripting & tools: Python (pandas, matplotlib), Bash, PowerShell, Git/GitHub, Jira Service Management, VirtualBox

SECURITY PROJECTS

SOC Detection Lab — github.com/HarryKlrr/soc-detection-lab 2025 – 2026

- Deployed Wazuh (SIEM/HIDS) with Sysmon telemetry on a Windows 10 endpoint in an isolated virtual network, correlating Windows Event Logs and process events in a single console.
- Executed nine attack scenarios from Kali Linux — brute force, encoded PowerShell, admin account creation, Defender tampering, audit-log clearing, scheduled-task persistence, Nmap reconnaissance, phishing triage and malware-hash triage — each mapped to a MITRE ATT&CK technique.
- Triageed every resulting alert and wrote nine incident reports and three response playbooks covering detection logic, scope, containment and remediation.
- Authored and validated custom Wazuh rules and Sigma drafts. Found two genuine detection gaps in the process — a missing log-forwarding rule and a custom rule that silently never fired — and documented and fixed both.

IoT Honeypot & Credential Analysis — Final Year Project · github.com/HarryKlrr/iot-honeypot 2025 – 2026

- Built a medium-interaction Cowrie honeypot on Ubuntu Server 22.04 emulating a vulnerable IoT device over SSH and Telnet, inside an isolated VirtualBox network with Kali Linux as the attack host (Hydra, Nmap, Nikto, Dirb).
- Generated and analysed 552 controlled authentication attempts across three attack runs using a Python pipeline (pandas, matplotlib), profiling credential use, session behaviour and attack timing.
- Compared observed credential patterns against Mirai's published default-credential dictionary and produced a MITRE ATT&CK-mapped threat report with defensive recommendations for IoT deployments.

Azure Cloud Security Lab — In progress · github.com/HarryKlrr/azure-cloud-security-lab 2026

- Moving the same detection work into a cloud tenant: Entra ID, Microsoft Sentinel as the SIEM and Defender for Cloud for posture. Tenant and Log Analytics workspace built; sign-in and audit logs ingesting.
- Deliberately introducing misconfigurations (impossible-travel sign-ins, over-privileged accounts, public storage) and writing a KQL hunting query for each class before promoting the useful ones to analytics rules.

Windows Server & Active Directory Build — University module 2024 – 2025

- Deployed a domain controller and single-domain AD environment (DNS, DHCP, AD DS, WDS, WSUS); created users, OUs and security groups, and hardened user environments with Group Policy, NTFS/share permissions and disk quotas.

EXPERIENCE

Co-founder & IT Support Analyst — HJ Digital Solutions · hidigitalsolutions.co.uk 2026 – Present

- Co-founded a small UK IT support business serving local customers. Every request is raised, triaged and resolved through Jira Service Management with a written resolution recorded on the ticket.
- Diagnose and resolve issues across Windows, Microsoft 365, networking, printers and device setup, including phishing triage, account-compromise checks and Microsoft 365 hardening for small-business tenants.
- Built and maintain the company website: eight pages, WCAG 2.1 AA verified, keyboard navigable, deployed on Cloudflare Pages.

Warehouse Operative — GXO Logistics, Kingswinford Jun 2026 – Present

- Work on a clearance-gated contract under the site's access-control and data-handling requirements.
- Enter, reconcile and exception-handle stock and consignment data in an enterprise WMS (the system of record), raising variances between physical and system state rather than letting inaccurate data through — to fixed daily targets.

Earlier roles — The Cotswold Company · Evri · Iceland 2023 – 2025

- Quality Assurance Operator (Jul – Sep 2025), Delivery Driver (Nov 2024 – Jan 2025), Pick & Packer (Jul – Sep 2023): target-driven, process-led roles demonstrating accuracy, reliability and independent working.

EDUCATION & CERTIFICATIONS

BSc (Hons) Cyber Security — 2:1 · Nottingham Trent University · 2026

CompTIA Security+ (SY0-701) — in progress

A Levels: Computer Science (B), Psychology (C), Business (C) · GCSEs: 10 passes including Computer Science (7) and Maths (6)

ADDITIONAL

[Hack The Box](#) — active in own time, working through machines to sharpen enumeration and detection skills.

Amateur boxer, training five to six days a week. · Own transport.
