

HARRY KLAIR

Cyber Security Graduate | SOC / Blue Team | Active SC Clearance

Rugeley, West Midlands · 07455 117100 · harryklair@hotmail.co.uk · Full UK driving licence

Personal Portfolio — [harryklrr.github.io](https://github.com/HarryKlrr) · github.com/HarryKlrr · linkedin.com/in/harry-klair-4a993b224

PROFILE

Cyber Security graduate (BSc Hons, 2:1) with active SC clearance, looking for a Tier 1 SOC analyst job. Most of what I know about detection I learned by building a Wazuh and Sysmon lab at home, attacking it from Kali and writing up what the SIEM did and didn't catch. I also co-founded a small IT support business and work its Jira queue, which is the closest thing to a live desk I could get without a job on one. Currently studying for Security+ and doing Hack The Box in my own time.

SECURITY CLEARANCE

Active SC clearance (granted 2026) plus BPSS. Happy to go through further vetting if needed.

TECHNICAL SKILLS

Security operations: Wazuh SIEM, log analysis, alert triage, writing and testing detection rules (Wazuh, Sigma), MITRE ATT&CK mapping, incident reports and playbooks, phishing and malware-hash triage

Endpoint & logs: Sysmon, Windows Event Logs (4625, 4720, 4698, 1102, 5007), PowerShell command-line logging, Linux auth logs, Cowrie JSON

Systems & directory: Windows Server, Active Directory, Group Policy, NTFS/share permissions, Ubuntu Server 22.04, Kali Linux

Networking: TCP/IP, DNS, DHCP, firewalls, Wireshark, Nmap, iptables

Cloud & identity: Microsoft 365, Entra ID, IAM; Sentinel, Defender for Cloud and KQL (lab, still learning)

Scripting & tools: Python (pandas, matplotlib), Bash, PowerShell, Git/GitHub, Jira Service Management, VirtualBox

SECURITY PROJECTS

SOC Detection Lab — github.com/HarryKlrr/soc-detection-lab 2025 – 2026

- Set up Wazuh with Sysmon on a Windows 10 VM in an isolated network so I could see Windows event logs and process activity in one place.
- Ran nine attacks against it from Kali: brute force, base64-encoded PowerShell, creating an admin account, turning off Defender, clearing the audit log, scheduled-task persistence, Nmap scans, a phishing email and a malware hash lookup. Mapped each one to its MITRE ATT&CK technique.
- Triaged every alert that fired and wrote nine incident reports and three response playbooks covering what fired, why, how far it got and how to contain it.
- Wrote custom Wazuh rules and Sigma drafts and tested them. Two incident reports originally recorded detection gaps; on re-checking, one was my own search method and one was a Windows audit subcategory that's off by default. Both reports were corrected and the write-up says so. One custom Sysmon rule still doesn't fire and is logged as open.

IoT Honeypot & Credential Analysis — Final Year Project · github.com/HarryKlrr/iot-honeypot 2025 – 2026

- Built a Cowrie honeypot on Ubuntu Server 22.04 pretending to be an IoT device over SSH and Telnet, inside a host-only VirtualBox network, with Kali as the attacker (Hydra, Nmap, Nikto, Dirb).
- Attacked it myself using IoT default-credential wordlists, then wrote a Python pipeline (pandas, matplotlib) to turn the 552 logged attempts into charts of credential use, session behaviour and timing.
- Compared the credentials that showed up against the list hard-coded in the Mirai source, and wrote a threat report mapped to MITRE ATT&CK with recommendations for securing IoT devices. It was a lab study, not an internet-facing capture, and the report says so.

Azure Cloud Security Lab — In progress · github.com/HarryKlrr/azure-cloud-security-lab 2026

- Same idea as the Wazuh lab but in a cloud tenant: Entra ID for identity, Sentinel as the SIEM, Defender for Cloud for posture. The tenant and Log Analytics workspace are built and sign-in and audit logs are coming in.
- Now working through a list of misconfigurations to introduce on purpose (impossible-travel sign-ins, over-privileged accounts, public storage) and writing a KQL hunting query for each one before turning the good ones into analytics rules.

Windows Server & Active Directory Build — University module 2024 – 2025

- Built a domain controller with DNS, DHCP, AD DS, WDS and WSUS, created users, OUs and security groups, and locked down user environments with Group Policy, NTFS/share permissions and disk quotas.

EXPERIENCE

Co-founder & IT Support Analyst — HJ Digital Solutions · hidigitalsolutions.co.uk 2026 – Present

- Started a two-person IT support business with a friend, helping individuals and small businesses locally. Every job goes through Jira Service Management and gets a written resolution before it's closed.
- Work the queue: Windows problems, Microsoft 365, Wi-Fi and networking, printers, new device setup. Also handle the security-flavoured requests, mainly phishing emails, checking whether an account has been compromised and basic hardening for small Microsoft 365 tenants.
- Built and look after the company website (eight pages, WCAG 2.1 AA checked, hosted on Cloudflare Pages).

Warehouse Operative — GXO Logistics, Kingswinford Jun 2026 – Present

- Clearance-gated contract, so the site has its own access-control and data-handling rules I work under.
- Key stock and consignment movements into the warehouse management system and reconcile inbound deliveries against what the system says should have arrived. Anything that doesn't match gets raised as an exception rather than keyed in wrong, and it all has to be done to daily targets.

Earlier roles — The Cotswold Company · Evri · Iceland 2023 – 2025

- Quality Assurance Operator (Jul – Sep 2025), Delivery Driver (Nov 2024 – Jan 2025), Pick & Packer (Jul – Sep 2023). Target-driven jobs where I was trusted to work on my own and get the details right.

EDUCATION & CERTIFICATIONS

BSc (Hons) Cyber Security — 2:1 · Nottingham Trent University · 2026

CompTIA Security+ (SY0-701) — studying, exam booked for later this year

A Levels: Computer Science (B), Psychology (C), Business (C) · GCSEs: 10 passes including Computer Science (7) and Maths (6)

ADDITIONAL

[Hack The Box](#) in my own time, mostly for the enumeration and log-reading practice.

Amateur boxer, training five or six days a week. · Full UK driving licence and own car.
